Closing the gap between a founder's vision and working software.

“We exist to close the gap between a founder's vision and the software that makes it real. That gap has killed too many good ideas.”

RX Alpha Tech is an Australian software studio building web applications, mobile apps and AI systems for businesses that need working product rather than a longer roadmap.

We were established in Australia in 2026, but the team behind us is not new. Our engineers have been shipping production software together since 2020 through our sister company, **AlphaCue Technologies**. RX Alpha Tech gives Australian clients a local entity, AUD contracts and GST invoicing, backed by years of delivery.

We were started by engineers who had watched too many good ideas stall behind the wrong technical team — endless discovery, junior developers learning on the client's budget, and a handover that never quite arrives.

We are a focused team of full-stack engineers and product thinkers. We are not a body shop, and we are not a design-first agency that hands off to junior developers.

Projects across the group

Clients in Australia, Bangladesh, Canada, the USA, Qatar, Japan and Belgium.

Speed through experience

We move quickly because we have built this before — not because we cut corners you'll pay for later.

Brutal clarity

If a feature won't earn its keep, we say so before it's built, not after it's invoiced.

You own everything

Full source code and infrastructure, handed over. No vendor lock-in, no hostage situations.

Built to last

Architected for real traffic, real data and real money from the first release.

Build it properly. Then get it used.

Three engineering disciplines, built to production standard — with the test coverage, security posture and handover documentation to prove it. AI integration for the systems you already run, and self-service kiosks. Then a growth team to make sure the thing you paid for actually finds its audience.

Web applications

SaaS platforms, operational dashboards, marketplaces and client portals, built on Django and Django REST Framework, with React front ends where a richer interface earns its keep. Architected for real traffic, real data and real money from the first release — multi-tenancy, role-based permissions, billing and audit trails included rather than bolted on.

Typical builds: subscription SaaS · internal operations platforms · booking and job-management systems · customer portals · marketplaces with payments and escrow

Mobile apps

Cross-platform iOS and Android apps in Flutter, delivered in weeks rather than quarters — plus native Android, and React Native (Expo) when one codebase should serve both web and app. We take apps all the way through store review, subscription billing and production monitoring — not just to a demo build on your phone.

Typical builds: consumer MVPs · field and technician apps · marketplace companions · subscription apps with RevenueCat · real-time and location-based products

AI systems

LLM integrations, document and image understanding, chatbots, automation and AI agents — built as new products, with the data isolation and review steps that make them safe to trust.

Typical builds: email-to-job extraction · OCR and document pipelines · AI advisors over your own data · classification and routing · computer-vision analysis

AI integration for existing businesses

NEW

Already running? You don't need a new platform to get value from AI. We wire it into your inbox, CRM, documents and databases so your existing team gets through more work with the tools they already use.

See page 04 →

Kiosk systems

Self-ordering, check-in, cashless canteen, ticketing and POS kiosks — software, card and payment hardware, and the back office — delivered with our partner Nutboltu.

NOW OPEN

See page 06 →

AI for the business you already run.

Most businesses don't need an AI product. They need the AI in front of them to do a specific job inside the systems they already pay for — reading the inbox, filling the form, answering the routine question, flagging the exception. That is what we build.

Inbox & enquiry triage

Incoming email and web enquiries read, the request extracted, and the job created and routed — instead of retyped.

Proven in BizzMate

Documents & OCR

Invoices, certificates, forms and stickers turned into structured records your system can use.

Pigeon Pedigree Pro · BIDBAJ · DailyOS

Customer assistants

Chat that answers from your own data and hands over to a real person when it matters.

Proven in AlphaCue AI Vet

Ask your own data

An AI advisor over your records and reports, so managers get answers without building a spreadsheet.

Proven in AgrowBizz

Classify & route

Leads, tickets and requests tagged, prioritised and sent to the right person automatically.

BizzMate actionability assessment

Workflow automation

Multi-step tasks across your tools handled by AI agents, with an approval step wherever money or customers are involved.

Built with Claude, OpenAI, Gemini

How an integration runs

1 · AI audit

We map your workflows and pick the two or three tasks where AI pays for itself.

2 · Fixed-price pilot

One workflow, on your real data, quoted in AUD before we start.

3 · Measure

Compared against how the task runs today. If it doesn't earn its keep, we say so.

4 · Roll out

Into daily use with monitoring, cost controls and documentation.

Safe to trust with real work

- **Data isolation** between clients and tenants — your data never mixes with anyone else's.
- **Human review** on anything that sends, pays or commits.
- **Safety rules before the model** — critical cases are caught before an AI call is made.
- **Cost controls** — response caching and model routing keep usage bills predictable.
- **No lock-in** — provider-agnostic across Claude, OpenAI and Gemini.

Not sure where AI fits?

Send us one task your team repeats every day. We'll tell you within 24 hours whether AI can take it on — and roughly what it would cost to find out.

rxalphatech@gmail.com
+61 450 288 951

A great product nobody knows about is a hobby.

Most studios hand over the code and wish you luck. We keep going — because the same team that understands how your product works is the one best placed to explain it.

Social media content

Planned content calendars, post design and copywriting across Instagram, Facebook, LinkedIn and TikTok — written for your audience, scheduled and managed, not posted when someone remembers.

Marketing video

Product demos, explainer videos, founder stories and short-form social cuts. Scripted, shot or screen-captured, edited and delivered in the formats each platform actually wants.

Paid advertising

Google Ads, Meta and LinkedIn campaigns — built, launched and managed against a real cost-per-lead target, with the tracking in place to know what the spend returned.

SEO & content

Technical SEO, site structure, local search and the written content that earns rankings. Built into the product from the first release rather than retrofitted a year later.

The complete package

You can take any of it separately. Most clients take the lot, because the alternative is briefing a second agency on a product they have never seen.

One team from idea to customers: discovery and build → brand and launch assets → store listings and landing pages → paid and organic acquisition → ongoing content and iteration. One point of contact, one invoice, nobody blaming the other side when numbers are soft.

Self-service kiosks, built end to end.

We now take on kiosk projects — the touchscreen software, the card and payment hardware, and the back office behind them. Kiosk work is delivered with our partner **Nutboltu (নাটবল্টু)**, which has been building card-based kiosk systems on free and open-source software in Bangladesh.

Kiosks Nutboltu has already built

Canteen kiosk

Faster canteen service and full financial transparency — every sale on record, no cash drawer guesswork.

Bus fare kiosk

Fares paid with a tap of a card, ending cash fare disputes between passengers and conductors.

POS kiosk

Point-of-sale terminals that can be customised to any shop or counter's way of working.

Recharge kiosk

Self-service top-up that keeps stored-value cards active without a staffed counter.

Initialisation kiosk

Issues new cards and links each one to its holder's details, ready for first use.

Open ERP

A single web-based platform bringing all of an office's management software together.

What we can build for you

- Self-ordering kiosks for restaurants, cafés and food courts
- Check-in and visitor registration for offices, clinics and events
- Cashless canteens for workplaces, schools and campuses
- Ticketing, card issuing and top-up stations
- Retail self-checkout and counter POS

What's included

- **Touchscreen software**, multilingual where your customers need it
- **Card, QR and payment terminal** integration
- **Back-office dashboard** with sales, reconciliation and reporting
- **Remote monitoring and updates** across every unit
- **Open-source foundations** — no per-kiosk licence fees

Pilot first, then roll out. We install one working kiosk on your site, prove it with real customers, and only then quote the rollout — fixed price in AUD, full IP on final payment.

NOW TAKING PROJECTS

Four steps. No surprises.

You should know what you are getting, what it costs and when it lands before anyone writes a line of code.

1 Discovery

We work out what actually needs building, then give you a fixed quote in Australian dollars before development starts.

2 Planning

Scope is broken into milestones, with designs signed off before they are built. You know what each stage delivers.

3 Development

Sprint-based delivery with weekly demos. You see working software every week, not a status report.

4 Launch & scale

Full handover of code and infrastructure, with the documentation your next developer will need.

What we commit to

- **You own 100% of the IP** on final payment — source code, infrastructure and all.
- **Fixed pricing in AUD**, with GST shown separately. No hourly creep.
- **If a milestone misses scope, we fix it at our cost.** Not yours.
- **Replies within 24 hours**, every working day.
- **No vendor lock-in.** Everything runs on infrastructure you control.

Engagement models

Fixed-scope project builds, staged MVP delivery, fixed-price AI integration pilots, or ongoing development retainers once a product is live. Most clients start with a defined first release and continue from there.

Discovery and prototyping in practice

A clickable prototype, so the client sees the product before a line of production code is written

AeroDefined

B2B MARKETPLACE · BELGIUM

PROTOTYPE

Where aviation deals take off — aircraft, engines, parts and the freight to move them, traded between companies on one platform.

A single engine sale can involve a seller, buyer, brokers, a freight forwarder and a customs agent, usually coordinated by email. AeroDefined puts it all in one deal record: four marketplaces under one account, every company checked against the EU VAT register (VIES) before it can trade, EASA Form 1 / FAA 8130-3 certificates and back-to-birth records on each listing, air, road and sea freight and customs quoted inside the same deal, message screening that keeps deals on the platform, and a full audit trail with EU hosting and GDPR built in.

Client AeroDefined, Belgium **Stage** Clickable prototype

AI systems

Four production AI products, each solving a specific operational problem rather than demonstrating a capability.

BizzMate

AI · LIVE

Turn the inbox into the job board: incoming email becomes an extracted, assigned, scheduled job — with quotes, invoices and a field app behind it.

AI job management for trades and construction. Email-to-job extraction with actionability assessment, Gmail/Outlook/IMAP connectors over OAuth, and dual-provider AI routing with strict data isolation between tenants.

Stack Django · Flutter **Scale** 57 models · 354 routes · 2,379 tests **Status** Live · passed Google OAuth and Meta review

HealthIQ AI

AI · MOBILE

Scan your food, know your health — an AI nutrition coach in your pocket.

Food analysis from a photo, barcode or nutrition label, scored against the user's own goals and medical conditions, with safety-critical allergen detection.

Stack Flutter · Firebase · Claude **Scale** 20+ Cloud Functions **Status** v2.4 · subscriptions via RevenueCat

AgrowBizz

AI · WEB

Run the whole farm from one place — livestock records, pedigree, production and real double-entry books, with an AI advisor that actually knows your herd.

Multi-species livestock records, pedigree family trees with inbreeding-risk flagging, species-aware production logging, and full double-entry accounting including balance sheet, trial balance, cash flow and AR/AP ageing.

Stack Django · DRF **Scale** 53 models · 268 tests · 15 apps **Status** Phase I complete **Visit** agrowbizz.com ↗

Pigeon Pedigree Pro

AI · MOBILE · SAAS

Photograph a paper pedigree certificate and the birds appear in your loft records — with breeding, health, feed and race history behind them.

Multi-tenant loft management SaaS with OCR-powered certificate scanning, entity extraction and pedigree mapping, four subscription tiers with metered limits and Stripe billing.

Stack Django REST · Flutter · Docker **Status** Commercial product in production

Web applications

Operational platforms carrying real transactions, real money and real compliance requirements.

BD Mate

COMMUNITY · AUSTRALIA

WEB · APP

Bangladeshis connected across Australia — find people nearby, local businesses, jobs, events and help, in Bangla and English.

A moderated community platform: member approval before posting, friends and private chat, a business directory with reviews, ownership claims and halal information, plus jobs, events, a buy-sell-rent marketplace and a fee-free local tasks board. Moderator console with grouped reports and community analytics. No advertising and no third-party tracking.

Stack React Native (Expo) · React Native Web **Status** Live at bdmate.online ↗ · early release

REXX

PRODUCTION

Work orders from the first call to the paid invoice — with the completion decision reserved for the person who owns the money.

Site job management for an Australian contracting operation. Seven-status job lifecycle with a quotation branch, server-enforced admin-only completion, itemised invoicing with GST options, purchase-order work orders and internal messaging.

Stack Django 5.2 · MySQL **Status** Deployed in production **Visit** rexxcrm.com ↗

DailyOS

PRODUCTION

Daily cash-up and back-office paperwork for multi-site retail — end-of-day reconciliation, supplier invoice scanning and accountant-ready exports.

Multi-tenant scoping by business and site, invite-only account hierarchy, live browser totals during reconciliation, and an industry-agnostic pack engine covering fuel, restaurant and workshop operations.

Stack Django 6.1 · PostgreSQL **Scale** 231 tests **Status** In daily use by a fuel-station operator **Visit** dailyos.work ↗

HireOMate

MARKETPLACE

Rent out the drill, the trailer, the camping gear — with deposits held rather than taken, condition photos on both ends, and a signed agreement in between.

Peer-to-peer rental marketplace supporting rentals, sales and rent-to-own instalments, PostGIS near-me search, and a request-to-book lifecycle with owner confirmation. Security-hardened with per-response CSP nonces.

Stack Django · DRF **Scale** 466 tests · 11 milestones **Status** Feature-complete **Visit** hireomate.com ↗

Sisters Kitchen

WEB · LIVE

Online ordering for a family home-kitchen and catering business, operable entirely from a phone.

Weekly menus with availability dates and serving times, weekly specials that close ordering automatically at deadline, and pre-orders capturing pickup details.

Stack Django 6 · MySQL **Status** Live, carrying real orders since launch

Mobile apps

Shipped through store review, with the moderation and safety work each category demands. Some were engineered by our sister company, AlphaCue Technologies.

Top 50 of 900+ innovations nationwide

Selected for Innovation Fair 2026, Bangladesh — visited by the Prime Minister of Bangladesh

NIRAPOD

AWARD-SELECTED

IOS · ANDROID

Crowdsourced incident reports that turn into real-time risk zones and location-based safety alerts.

Real-time incident reporting with photos and GPS, automatic risk-zone generation from clustered reports, and location-based push alerts delivered through geohash FCM topics. At the fair, visitors consistently praised NIRAPOD for solving a real-life problem: knowing where it is unsafe before you get there.

What getting through review actually took

- **Google OAuth and Meta app review** passed for BizzMate's inbox and Meta integrations.
- **Subscription billing** through RevenueCat in HealthIQ AI.
- **User-generated content rules** — live moderation consoles, reporting and audit trails in Stranger Connect and NIRAPOD.
- **Age gating, user blocking and legal pages** added to meet store policy for chat and AI apps.

Proven in production.

These are the technologies behind the products in this profile — across RX Alpha Tech and AlphaCue Technologies — shipped, tested and running for real users today.

SISTER COMPANY

AlphaCue Technologies

Dhaka, Bangladesh · Est. 2020 · alphacuetech.com

The engineering team behind RX Alpha Tech, shipping since 2020.

“Builders first. A company second.”

AlphaCue Technologies is a software studio in Dhaka, Bangladesh, founded in 2020. It builds custom software, mobile apps and AI systems for founders and operators across Asia, North America and Europe.

RX Alpha Tech and AlphaCue share engineers, standards and ways of working. RX Alpha Tech is the Australian contracting entity; AlphaCue is where the work started, and where much of it is still engineered.

It runs on the same principles you have read in this profile: senior engineers only, outcomes rather than seat-based staffing, and full IP transfer.

Clients in Bangladesh, the United States, Canada, Japan and the United Kingdom.

2020

Long-running products

BRPFC, a national racing federation platform, has been maintained continuously for more than 2.5 years.

Government & institutional

A materials-testing laboratory system in live service for LGED, and a research data platform for IDRN.

Hard data problems

Bangla legacy-encoding recovery, a 33,709-record searchable archive, and cost-realistic trading backtests.

North American overlap

4–5 hours of daily overlap with US and Canadian working hours, with fixed quotes in USD or BDT.

Also delivered by AlphaCue

ShobParts (auto-parts preorder, 8-stage lifecycle) · IDRN (dairy research analytics, idrn-dairy.com) · VisionBancharampur (member investment society) · SPIRIT (accessible matrimony platform) · MOTtraining.net (course website for a UK MOT training centre) · Gyros Pizza Fusion and Curry King & Grills (Canada) · Dolna Drive (ride-hailing)

Platforms in production.

From a government laboratory to Japanese photo studios — systems carrying real records, real money and real users.

MyACE JP

WEB · JAPAN

COMPLETE

Japanese photo studios' customers pick their shots, lay out the product themselves, and the studio approves the design before it prints.

The largest system in the portfolio. Live at myace.shop as three deployable pieces — Django REST API, React customer app and a separate staff admin — on one backend. Campaign pricing tied to visit date, annual passes, multi-carrier zone-based shipping, a mail-magazine system, and JWT with Google OAuth.

Stack Django 4.1 · DRF · React · SimpleJWT **Status** Live

LGED Materials Testing Laboratory

GOVERNMENT

IN SERVICE

Civil engineering materials tests, from sieve analysis to signed report, for a government road-construction laboratory.

Deployed at the Cox's Bazar laboratory, replacing per-test spreadsheets. Every certified result traces to scheme, bill part and sample. Reports carry generated barcodes, and an explicit unsigned-to-signed queue keeps uncertified results out of circulation.

Stack Django 4 · MySQL **Country** Bangladesh

BRPFC

WEB

2.5+ YEARS MAINTAINED

A national pigeon racing federation's races, results and auctions in one place, built to hold up when a hundred bidders arrive at once.

Live at brpfc.org. Race records, national races, velocity calculator, leaderboards and timed auctions on ASGI, with the bidding path load-tested in Locust against race conditions.

Stack Django · DRF · MySQL **Country** Bangladesh

AkashPigeons

WEB · LIVE

AUCTIONS

Pedigrees, race results and live auctions for a racing-pigeon loft — with bidding rules built to match how the sport's real auction houses work.

Four-generation pedigree charts computed from ring numbers, race results by age category with loft-specific distances, and computed championship rankings. Auctions with anti-snipe soft close, hidden-maximum proxy bidding and concurrent bid verification. Fully translated into Bangla.

Stack Django 4.2 · DRF · MySQL **Status** Live at akashpigeons.com

Gateway Entertainment

MARKETPLACE · CANADA

Crew build one profile with their reel and certificates; employers find them by department, skill and location instead of by who they already know.

Talent marketplace for crew, employers and moderators across web and mobile from a single API, documented at three levels — PRD and ERD, a maintainer's guide, and dated API change logs.

Stack Django 4.2 · DRF · SimpleJWT **Status** Ongoing Visit [Live preview](#)

AI, finance and archives.

Products where getting the numbers — or the safety rules — wrong is not an option.

AlphaCue AI Vet

AI · EXTENDED RELEASE

Ask about your pet's symptoms, get an answer in seconds — and reach a real vet when it actually matters.

AI symptom checker grounded in the pet's profile, with an emergency-keyword override that fires before any AI call. A normalised response cache keeps AI costs down. 13 apps, 19 models, 101 endpoints, a 22-page Flutter integration guide, bKash and Stripe payments.

Stack Django 6 · DRF · Firebase **Country** Bangladesh **Visit** alphacuevet.com ↗

AlphaCue Imports

WEB · IN PRODUCTION

An import business running end to end on one system: storefront, reseller network, and books that know what every shipment actually cost.

Finance module delivered across eleven milestones — 35 models, 495 tests, and one ledger answering cash flow, client debt and product profitability instead of four spreadsheets.

Stack Django 4.2 · MySQL **Scale** 495 tests **Visit** alphacueimports.com ↗

Md Zakir Hossain Memorial & Digital Library

WEB · LIVE

A lifetime of Bangla scholarship recovered from obsolete encoding and published as a permanent, searchable archive.

17 works across 1,047 readable sections, 5,699 genealogy records and 33,709 searchable institutional records, recovered through an empirically validated Bijoy-to-Unicode pipeline.

Stack Django 6 · SQLite **Status** Live at mdzakirhossainalamgir.com ↗

Algorithmic Forex Trading Systems

AI · QUANT

Eight trading systems built to one rule: no strategy goes live until it survives an honest, cost-realistic, out-of-sample test.

Backtests model spread, commission, swap and margin rather than mid-price fills. Live MT5 execution for classical strategies; ML and RL systems held at research stage.

Stack Python · MetaTrader 5 API · pandas **Client** Canada

ThreeBie

WEB · AI

MVP COMPLETE

A grocery optimisation engine that saves shoppers money: one basket, priced across every shop that delivers to your postcode — including the split that's cheaper than any single store.

Postcode-scoped catalogues, AI-assisted similar-product matching, and three ranked basket options with visible substitutions and delivery costs, through to Stripe checkout. Cached basket combinations keep it fast as the shop list grows.

Stack Django 4.1 · MySQL · pandas · Docker **Client** United States

Tell us what you're trying to build.

A short conversation is usually enough for us to tell you whether it is a four-week build or a four-month one — and whether we are the right team for it. We reply within 24 hours.
